

01 — Executive Summary

VisalQ is an AI-powered visa intelligence platform that helps individuals navigate international visa applications with confidence and accuracy. It eliminates the confusion, guesswork, and costly mistakes that lead to visa rejections by combining real-time AI document auditing, live embassy requirement intelligence, and an expert consultation layer — all in one platform.

This document outlines the full scope of work Orbit Digital Agency will design and deliver under Contract ODA-2026-0050, covering both the **Web Application** and the **Android Mobile Application**. iOS is out of scope for this engagement and will be covered under a separate future agreement.

The Problem VisalQ Solves

The Problem	The VisalQ Solution
Visa rejection rates are 20–40% for first-time applicants	AI document audit catches issues BEFORE submission
Embassy requirements scattered across outdated sites	Live Gemini AI fetches real-time official requirements
Document errors discovered only after rejection — fees lost	Claude 3.5 audits every document with a 0–100 confidence score
Immigration lawyers charge \$300–\$2,000 per consultation	AI chat assistant + VIP expert booking at a fraction of the cost

02 — What We Are Building

VisalQ is delivered across two surfaces under this agreement: a Web Application and a native Android Mobile Application. Both surfaces share the same backend, AI engine, and Firebase infrastructure.

Three Core AI Capabilities

01	Document Intelligence (Claude 3.5 Sonnet) AI reads and audits every uploaded document — passport biographic page, bank statements, employment letter, invitation letter, travel insurance. Produces a scored report (0–100) with red flags, name consistency checks across all documents, and actionable recommendations. On Android, documents can be captured directly from the camera.
02	Live Requirements Intelligence (Gemini 2.0 Flash) Real-time embassy requirements fetched via Google Search grounding, structured into a checklist mapped against the user's uploaded documents. Every result includes source citations linking to official embassy pages, a 24-hour freshness indicator, and a mandatory staleness warning if data is approaching expiry.
03	Consultation Layer (Chat + VIP Expert Booking) A context-aware AI chat assistant that knows the user's nationality, destination, uploaded document audit results, and requirements. When complexity is detected, the platform escalates to a VIP expert booking (Calendly), automatically pre-loading the user's full audit summary before the call.

Target Users — Who This Platform Serves

The Tourist	The Professional	The HR Manager
Traveling to Schengen, UK, or USA for the first time. Confused by checklists. Needs simple guided experience. High volume market.	Relocating for work or attending conferences. Needs speed, accuracy, and a reliable pre-submission audit. Values time over cost.	Processing visa applications for a team of employees. Needs multi-application tracking and compliance reporting.
Consumer High Volume	B2C Premium High LTV	B2B Recurring Revenue

03 — Complete Feature Matrix

The table below defines the complete agreed scope. Every feature marked Yes is included in the fixed contract value of AED 10,500.

Feature	Web App	Android App	Phase	Notes
User Authentication (Google + Email)	✓ Included	✓ Included	2	Firebase Auth
4-Step Onboarding Wizard	✓ Included	✓ Included	2	Nationality → Destination → Type → Purpose
Application Management Dashboard	✓ Included	✓ Included	2	Firestore real-time
Profile Management	✓ Included	✓ Included	2	Passport details, occupation
Document Upload (PDF / JPG / PNG / HEIC)	✓ Included	✓ Included	3	Drag & drop on web
Camera Document Capture	N/A (web)	✓ Included	3	Android camera native
AI Document Audit Engine (Claude 3.5)	✓ Included	✓ Included	3	HARDEST phase
Audit Score Card (0–100)	✓ Included	✓ Included	3	Colour-coded
Findings & Red Flags Report	✓ Included	✓ Included	3	Actionable items
Cross-Document Name Matching	✓ Included	✓ Included	3	Arabic/Hindi/Urdu support
PDF Audit Report Export	✓ Included	✓ (Share Sheet)	3	Branded PDF
Shareable Audit Report Link	✓ Included	✓ Included	3	Time-limited, auth-gated
Live Visa Requirements (Gemini + Search)	✓ Included	✓ Included	4	Google grounding
Requirements Source Citations	✓ Included	✓ Included	4	Official embassy links
24-Hour Cache + Staleness Warning	✓ Included	✓ Included	4	Mandatory banner
AI Chat Assistant (Context-Aware)	✓ Included	✓ Included	5	Full audit context
VIP Expert Booking (Calendly)	✓ Included	✓ (WebView)	5	Pre-call summary auto-sent

Feature	Web App	Android App	Phase	Notes
Push Notifications	 Browser only	 FCM Native	5	Audit complete alerts
Biometric Authentication (Fingerprint)	 Not applicable	 Included	6	Android secure enclave
Offline Mode (Read-Only)	 Not applicable	 Included	6	Cached audit results
Data Deletion (GDPR / UAE PDPL)	 Included	 Included	6	Full compliance flow
T&C + Consent Acknowledgment Flow	 Included	 Included	6	Legal requirement
Google Play Store Publishing	N/A	 Included	6	Full submission support
VPS Hosting (12 months)	 Included	N/A	6	SSL + PM2 + NGINX

04 — Technology Plans: A vs B

Per Clause 1 of the contract, the technology framework will be selected at the Project Kick-Off meeting and documented in Annexure A. Both plans deliver **identical features** and the same contract value. The choice is a technical implementation decision. Below is the full comparison.

Criterion	Plan A — Flutter	Plan B — React Native + Expo	Recommendation
Single codebase (web + Android)	✓ Yes — one Dart codebase	⚠ Partial — separate codebases	Flutter
Web App quality	Good (Flutter Web)	✓ Excellent — standard React	React Native
AI proxy integration	Dart HTTP client	✓ Node.js familiarity	React Native
Camera & biometric	✓ Excellent native	✓ Excellent via Expo	Equal
Firebase SDK	✓ FlutterFire	✓ React Native Firebase	Equal
Push notifications	✓ FCM native	✓ Expo Notifications	Equal
Offline mode	✓ Hive / SQLite	AsyncStorage / MMKV	Flutter
iOS future expansion	✓ Same codebase	✓ Same codebase	Equal
Build pipeline	Flutter / Codemagic	✓ Expo EAS (proven)	React Native
Estimated delivery speed	✓ ~15% faster	Separate web + mobile	Flutter

⚠ IMPORTANT — Binding Decision

The technology stack is selected at the Project Kick-Off meeting and countersigned in Annexure A.

Changing the framework mid-development constitutes a full project restart treated as a new Change Order.

Both plans deliver the same agreed feature set per Clause 4 of Contract ODA-2026-0050.
